Test Overview

Suite: Week3 E2E Testing
Execution Date: 25 March 2026
Base URL: localhost:4000
Tool: Postman (REST client + Post-response scripts)
Total Tests: 26
Passed: 26 / 26
Failed: 0 / 26
Overall Result: ALL TESTS PASSED

Test Users

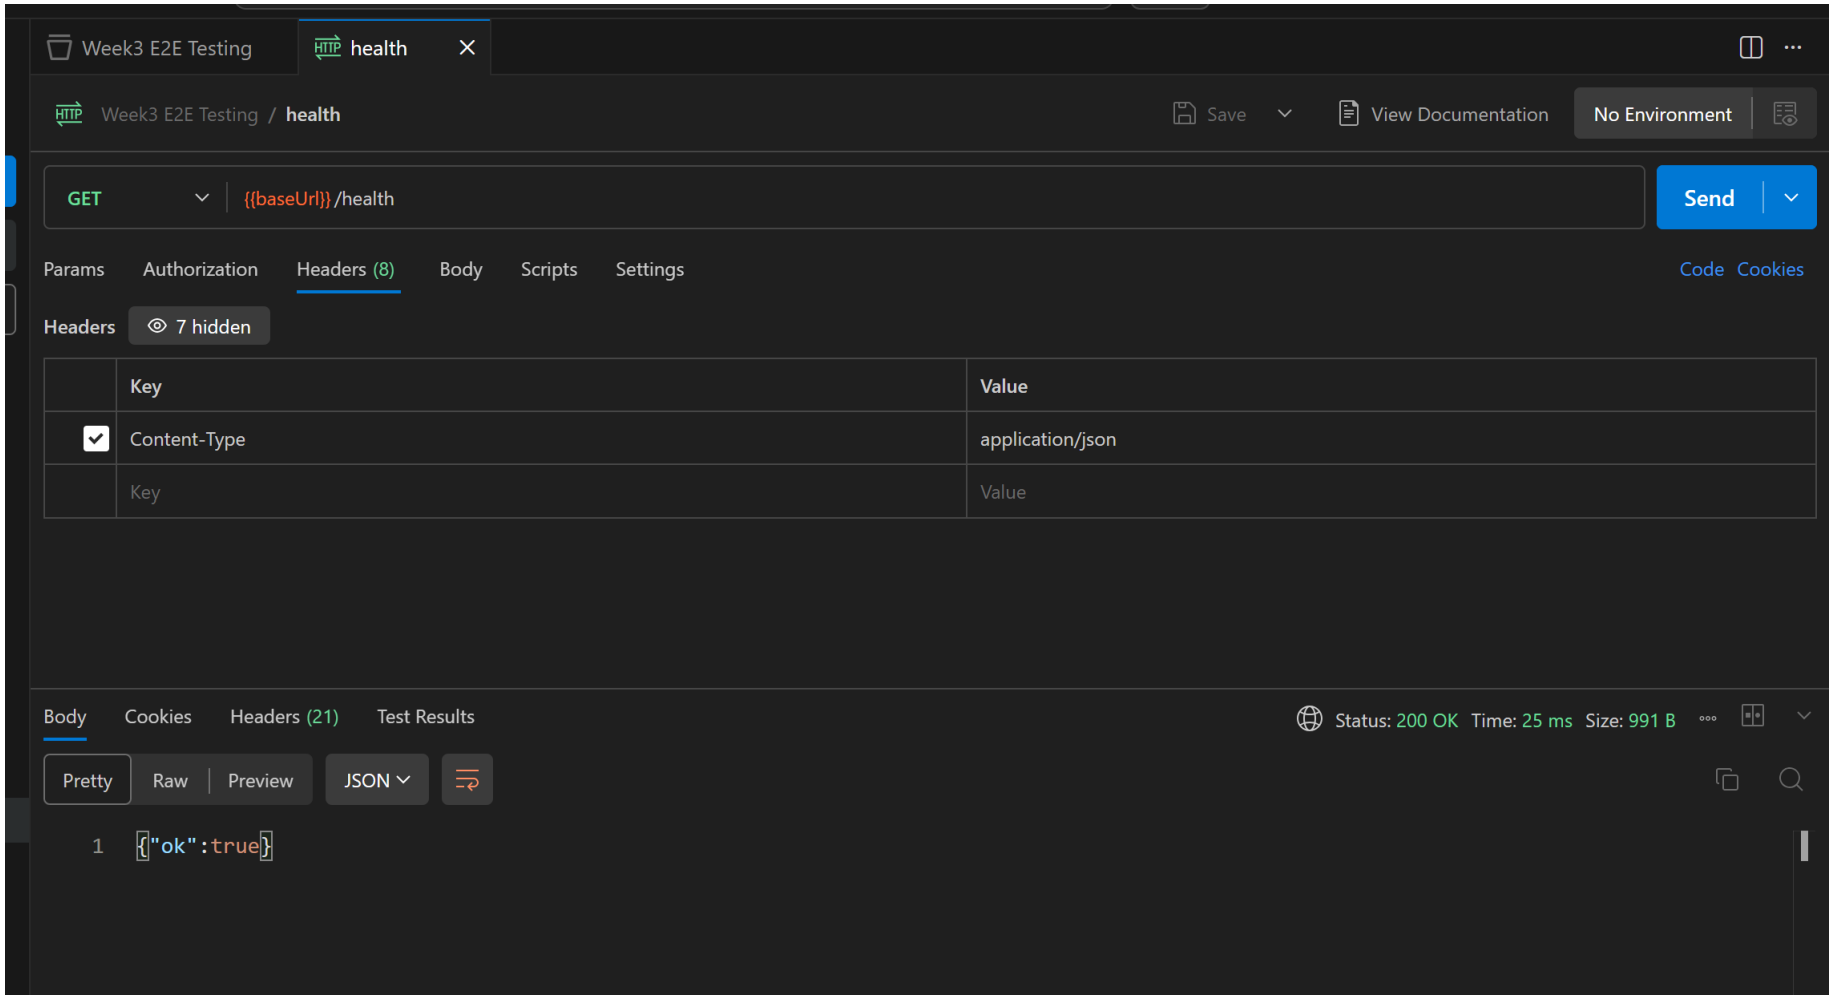
Name	Role	Email	User ID (short)	Score Before	Score After
Customer One	CUSTOMER	customer1@test.com	cmn6czvhh0000…	90	**95**
Worker A	WORKER	workera@test.com	cmn6d2x5a0001…	92	**95**
Worker B	WORKER	workerb@test.com	cmn6d4px80003…	92	—

1. System Health

TC-01 Health Check

ID	Test Case	Endpoint	Method	Expected Result	Actual Result	Actor	Status
TC-01	**Health Check**	/health	**GET**	200 OK, {ok: true}	200 OK, {"ok":true}	—	**PASS**

Screenshot:



2. User Registration

TC-02 Customer Signup

ID	Test Case	Endpoint	Method	Expected Result	Actual Result	Actor	Status

TC-02	Customer Signup	/v1/auth/signup	POST	201 Created, token + user returned	201 Created, reliabilityScore: 90, role: CUSTOMER	Customer One	PASS

POST {{baseUrl}} /v1/auth/signup Send

Reliability Score Change Summary

User	Score Before	Score After	Delta
Customer One	90	95	**+5**
Worker A	92	95	**+3**
Worker B	92	— (not reviewed)	—

Key Observations

- All 26 test cases executed successfully — 100% pass rate.
- Full job lifecycle validated end-to-end: CREATE → ACCEPT → START → COMPLETE (emergency plumbing job).
- Concurrent job acceptance correctly blocked: Worker B received 409 Conflict on an already-locked job.
- Duplicate review submission correctly rejected: 409 Conflict on second POST /v1/reviews for same job.
- Non-participant review correctly blocked: Worker B received 403 Forbidden for a job they were not assigned to.
- Reliability scores updated correctly after mutual reviews: Customer +5 (90→95), Worker A +3 (92→95).
- Postman post-response script assertions confirmed reliability scores changed for both parties.
- Invalid enum value ('WORKER B' instead of 'WORKER') correctly caught with a 409 field validation error.

Overall Verdict

PASS — All 26 test cases passed.

The Week 3 E2E test suite confirms that the API correctly handles user registration, authentication, emergency job creation, worker assignment, full job lifecycle transitions, mutual review submission, reliability score calculations, and all critical guard rails.
